

Foreword

It is a great privilege to once again present the 2014 Cavite Socio-Economic and Physical Profile. This is a fruition of gratifying effort of the Research, Statistics, Monitoring and Evaluation Division of the Provincial Planning and Development Office.

The SEPP embodies a clear view of the province's statuses focused on different sectors of the society such as social, economic, environment, and local administration among others.

The economic development in Cavite is still progressing positively, providing the Caviteños with opportunities for a better quality of life. The agricultural sector is being challenged considering various environmental disturbances relative to natural calamities. On the other hand, social development is in consonance with economic development as exhibited by numerous housing and health care system improvements.

The journey continues for a globally competitive province.

May the readers, researchers and policy makers find this Profile helpful in terms of statistics.

We offer the completion of this document to our Creator, our Lord Almighty.

Thank you very much.
